

# BACKYARD HABITAT

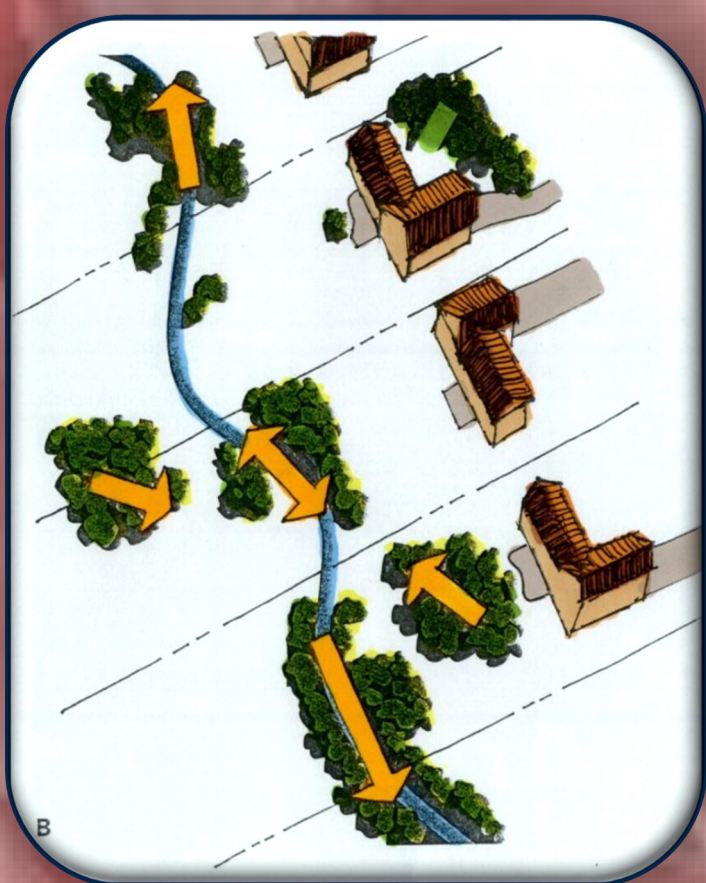

Attracting Wildlife  
to Your Property

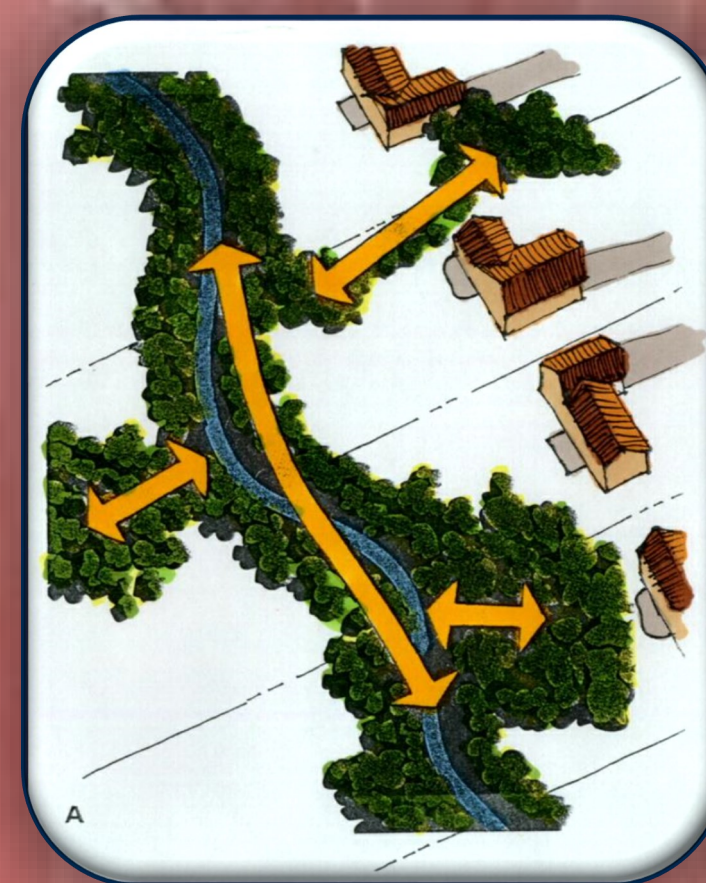

Conservation  
Starts at Home

**Whether your property is 1/4 acre or several acres, adding habitat components can help wildlife thrive.**

Urbanization and agriculture has dramatically impacted wildlife by fragmenting and reducing the amount of natural habitat.

**Fragmented** habitats are too small and provide little value to wildlife.

**Connected** habitats create an area much more beneficial to wildlife.

Including multiple habitat features in your landscaping provides an oasis for wildlife, improves connectivity with other habitats, and can replace critical habitat components that have been lost.

## Habitat Components

Food

Fruiting Trees  
& Shrubs

Water

Water Features

Shelter

Rock &  
Brush Piles

Flower  
Gardens

Naturalized  
Ponds

Tree & Shrub  
Groves
